

30-OFF TANKS FOR THE LUBRICANT INDUSTRY

This week we saw the first 5 of 30-off stainless steel 316, low profile tanks we are supplying one of Europe's largest lubricant manufacturers leave site. They will be installed in Shrewsbury at our customers production site. Once completed, the project will total 260,000 litres of hygienic lubricant storage.

The tanks will be installed in stages on a mezzanine floor with a central walkway positioned underneath. Hence, the tanks were designed to be easily installed on the steel framework, with bolt on stub legs for ease of transport.

All these tanks will be designed and manufactured in house, inside our purpose built fabrication bay, utilising the latest fabrication techniques and equipment. To find out more about our new vessels, please click here: tanksandvessels.com/new-vessels
