Another 500,000 Litres of Storage for the Chemical Manufacturing Industry

As part of a staged repeat order we have supplied 2-off 125,000 litre stainless steel bulk storage vessels. The tanks were designed in line with EN 14015 and manufactured in house with an interlocking flat sloping base.

The tanks will now be installed at our customers Manchester based site where they will store speciality heavy duty chemicals. Meanwhile, the next phased delivery of 2-off tanks are in production on our fabrication shop floor to suit the customer timescales.
