

As heating bills soar, one way you can save money this winter is by checking your doors and windows are properly sealed.

A large percentage of heat loss in a home can occur around windows and doors where seals are worn or have degraded over time, allowing warm air out and cold air in. This loss of heat can be expensive but there is a simple fix to help close gaps and reduce rising bills this winter.

Delta Rubber offer a simple, cost-effective remedy for window and door heat loss with our extensive choice of rubber and sponge rubber strip at <https://shop.deltarubber.co.uk/rubber-strip.html>. Our self-adhesive easy fixing range of rubber strip is the ideal low-cost solution where heat loss is occurring around your windows and doors. Simply remove the old seal, clean, then dry the surface and fix your new rubber strip to the prepared surface.

Available in the net's largest always-in-stock selection of widths and thicknesses, our solid rubber strip and closed cell rubber sponge strip is also waterproof, giving the added benefit of preventing water ingress.

This multipurpose product has many uses including flexible jointing strips, impact protection, packing voids and packaging blocks through to fixing on the foot of garage doors to prevent leaves and rain from encroaching.

Visit <https://shop.deltarubber.co.uk/rubber-strip.html> to view our choice and to securely buy yours online today. Find out more about Delta Rubber Limited on our company website at <https://deltarubber.co.uk>.
