MICRO-MESH THE CUSHIONED ABRASIVE

MICRO-MESH is made with a cloth backing, followed by a layer of specially formulated latex.

Silicone carbide or aluminium oxide grit is bonded on the ultra fine cloth with flexible glue and is perfect for polishing, cleaning and finishing.

The beauty of MICRO-MESH material is that when pressure is applied the crystals recede and rotate slightly to present their sharp cutting edges evenly across the surface. This creates a very fine, uniform scratch pattern. The larger crystals result in a longer lasting material that resists loading and heat build up.

WHICH TYPE OF MICRO-MESH SHOULD I USE?

There are 4 types of MICRO-MESH that we stock

MICRO-MESH REGULAR

9 grades ranging from 1500 through to 12000. This is equivalent to FEPA 600g to 1 micron.

All grades are Silicon Carbide except 8000 and 12000 which are Aluminium Oxide.

Typical Applications: plastics, coatings, paint, varnish, wood and soft metals such as brass and precious metals.

MICRO-MESH MX

In 13 grades from 60MX through to 1200MX. This is the equivalent to FEPA 240g to 3 micron.

All grades are Silicon Carbide except 800 and 1200 which are Aluminium Oxide. MX provide the same fine finish as REGULAR, but has a faster cutting action, making it superior for hard surfaces.

Typical Applications: metal and hardwood - surgical instruments, engine components, molds and dies, knives, shears etc

MICRO-MESH AO

In 7 grades from 300AO through to 12000AO. The is the equivalent to FEPA 180g to 1 micron.

A yellow colour material, all grades are Aluminium Oxide.

Typical Applications: Solid surface countertops such as Corian. 300 AO will removes machined milling marks in unfabricated solid surface.

For polishing aluminium surfaces such as leading edges of aircraft.

MICRO-MESH DIAMOND

In 12 grades from 40MXD through to 1800MXD. The equivalent to FEPA 180 to 1 micron.

Cloth backed, ultra flexible diamond sheets for finishing critical surfaces. High performance, long lasting diamond abrasive that provide lower RAs while removing 30-70% less surface stock than conventional abrasives.

Use on hard metal alloys, ceramic and stone.

MICRO-MESH grits work slightly differently to ordinary FEPA grits - use this chart to work out the correct grit for you.

LIQUID COMPOUNDS

MICRO-GLOSS

MICRO-GLOSS LIQUID ABRASIVE

A polish and cleaner for Polycarbonate, Gelcoat, Vinyl Coatings, Plastics etc. Water based formulation that contains an abrasive crystal in micron gradings. Use after 12000 MICRO-MESH as a final step to add lustre.

Micro-gloss 5 will remove scratches up to 9 micron in depth, this should be followed by Micro-gloss 1.

Dampen surfaces prior to application. Can be used by hand or with a lambs wool Tuf-Buf.

MICRO-GLOSS LIQUID ABRASIVE		
Bottle Size	Micron Size
