  - 1 Workshop Manager
  - 1 Workshop Storemen1 Workshop Foremen
  - All staff & PAYE with over 50 Tradesmen at peak
  - Pipework meters in total = 14000M with an average nominal bore size 80mm

## Waste to Resource Leyland Sept 2009-June 2010

“The time frame to win this project between tendering the initial budget to winning the award of contract was some 24 months but our persistence in the end paid dividends as we not only won the Thornton site but also won the Leyland project which ran with a three month lag behind Thornton”

*Michael Ventre Sales & Business Development Director Laker Vent Engineering*

*“As a PFI project, the time period from initial interest to financial close and on to construction is often 3 years + but LVE stayed with us, secured the work and we are glad that they did. Given the complex and sometimes unique nature of the piping systems on the Lancashire Waste Project, W2R was looking for a contractor that was competent, professional and flexible as well as good value and LVE met those criteria. LVE worked with our teams to help with design detailing and construction methodology and went on to carry out the materials procurement, shop fabrication, erection and testing. LVE did a great job and have been good to work with!”*

*Bob Johnson, Project Director, Waste 2 Resources LLP*
