

The single skin steel partitioning was installed in Telford to act as a Locker room / Changing room for warehouse operatives. The partitioning was designed to fit within a used area of the warehouse to store staff lockers. Adding the partitioning and suspend ceiling over the area keeps the area looking tidy and prevents dust getting all over the staff's bags and clothing whilst they are at work.

The single skin steel partitioning was installed with a single access door and a single window in the doorway, the customer will install lighting in there, and a rear window into an office area will be covered over also.

The partitioning is finished in standard powder coated grey other colours are standard but we can also powder coat in a specific RAL or BS colour to match company colours

The single skin steel partitioning and suspended was installed In Telford and took 2 guys 1 day to install.
