

New Autoclaves, Easier Match

With the recent introduction of a number of new laboratory and research grade autoclaves, Priorclave has simplified the selection process. Standard models now included more features and benefits than previously. These significant changes enable customers to match a Priorclave autoclave more easily to their specific sterilizing requirements.

On stand Z3 A18 at Medlab 2023, this British autoclave design and manufacturing company had the opportunity to highlight the extent of the recent changes. Priorclave autoclaves are now inclusive within three new ranges – BASE, SMART, PERFORMANCE.

Currently there are more than 70 standard Priorclave autoclaves, including [Top Loading](#) and [Horizontal](#) chamber models, with capacities from 40 to 700 litre. Each model incorporates the very latest version of Tactrol®, a microprocessor controller developed by Priorclave for easier programming of the sterilising cycles.

Laboratory and research grade autoclaves in the new ranges will still appeal to the same diverse customer base involved in food and drink, dairy, pharmaceutical, agriculture, education, healthcare and research establishments. And they will continue to offer a superior anti-microbial exterior finish to body panels and frames. This is a highly effective and permanent treatment for lifelong control of harmful bacteria and protection against the threat of cross contamination. This tough special epoxy finish is proven to reduce bacterial growth by up to 99.99% and is highly effective against MRSA, E.coli, Listeria, Legionella, Campylobacter, Salmonella, Pseudomonas and over fifty other species.

The high standards maintained at every stage of production ensures the operational longevity of every research grade laboratory autoclave that leaves the UK manufacturing centre. And all supported by first class pre- and after-sales [technical support](#).
